Although it was customary for sea-island planters to provide their Negro quarters with floors, occasionally temporary quarters were built without floors as a means of combating some contagious disease. For instance, after the slaves on his plantation had suffered from a disastrous attack of Asiatic cholera, E. M. Whaley, of Little Edisto Island, burned the old quarters and built temporary ones without floors at a considerable distance from the former location. It was to the planter's interest to keep his "people" well and as comfortable as he deemed consistent with his plantation economy, for a slave was the most valuable piece of property he possessed. Cattle were valued at $7 a head, a yoke of oxen and wagon at $45, a mule at $100, but a prime slave might bring as high as $2,000.

MEDICAL CARE OF THE SLAVE

758

Sea-island planters, aside from humanitarian reasons, carefully guarded their people's health because it was good business to do so. In the lists of rules which the planter included in his contract with his overseer, there invariably occurred specific instructions concerning the medical care which the Negroes should receive. P. C. J. Weston's instructions to his overseer on his rice plantation in South Carolina began with the statement, "The Proprietor, in the first place, wishes the Overseer most distinctly to understand that his first object is to be, under all circumstances, the care and well being of the Negroes." The instructions further read: "Strong medicines should be left to the

the village was moved about three-fourths of a mile away to the pine woods and the houses built farther apart.

Smallpox and yellow fever also caused the planters considerable alarm, although there were more widespread efforts to prevent these infectious diseases than others to which the Negroes were subject. The state quarantine laws greatly reduced the number of cases of yellow fever and the planter's general use of vaccine lessened the epidemics of smallpox. Henry A. Middleton, Jr.'s, Weehaw Plantation Book indicates that he regularly had the black children vaccinated.

Although sea-island planters usually considered that the winter months were the hardest for the Negroes and the summer months for the whites, the Negroes also suffered from malaria, although not to the same extent as the whites. In 1857 James Hamilton Couper wrote to his son James that the illness of another son was "induced by the same state of the atmosphere which has caused a very general malaria of typhoid fever among the Negroes." For four weeks during this attack there was an average of forty ill in the plantation hospital.[58]

The death of a trusted slave often brought a deal of sorrow into the planter's family. In recounting the deaths on the plantation in a letter to his son, Couper wrote in 1857:

> To myself personally the most painful loss has been that of poor old Sandy and his wife Joan. . . . I requested Mr. Brown to read the funeral service at his grave; and your mother, myself and the family attended. He was an honest, faithful and good man; and I part with him as with a devoted and tried friend. He was
